

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1. (Original) An angular velocity sensor comprising:
  - a substrate made of single crystal silicon and having a tuning fork shape, the substrate including
    - a plurality of arms extending in parallel with each other, and
    - a joint section for connecting respecting ends of the arms with each other;
    - a barrier layer provided on each of the plurality of arms of the substrate, the barrier layer containing silicon oxide;
    - a first adhesion layer provided on the barrier layer, the first adhesion layer containing titanium;
    - a first electrode layer provided on the first adhesion layer, the first electrode layer containing at least one of titanium and titanium oxide;
    - an orientation control layer provided on the first electrode layer;
    - a piezoelectric layer provided on the orientation control layer;
    - a second adhesion layer provided on the piezoelectric layer; and
    - a second electrode layer provided on the second adhesion layer.
2. (Original) The angular velocity sensor of claim 1, wherein the orientation control layer comprises dielectric oxide material containing Pb and Ti.

Application No.: 10/586,712  
Amendment Dated: April 30, 2009  
Reply to Office Action of: April 15, 2009

MAT-8867US

3. (Original) The angular velocity sensor of claim 1, wherein the orientation control layer comprises lead titanate containing at least one of La and Mg.

4. (Currently Amended) The angular velocity sensor of claim 1, wherein the piezoelectric layer comprises ~~lead~~lead zirconate titanate.

5.-9. (Cancelled).
